Combined scaffold from fiberglass plastic PSK.

Scaffolds are intended for working in the auto halls of factories of electric communication instead of actual wood scaffolds and are designed according to general industrial norms of safety GOST 24258 "Scaffolds. General technical conditions", and to branch's technical standards.

The main parameters of scaffolds:

Marking of the scaffold	Name of parameters		
	Height of the working platform, mm	Dimensions of the working platform, mm	Mass, kg, not more
ПСК-0,2	200	250x450	3
ПСК-0,4	400	350x350	4,5
ПСК-0,5	500	350x350	5
ПСК-0,6	600	350x350	6

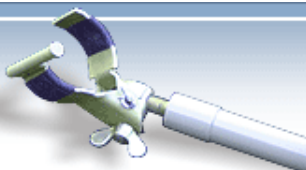

The working platform and steps of scaffolds is manufactured from multiply plywood for ensuring ergonomically parameters.

All scaffolds (except PSK-0,2) can be equipped with steps either from one or from two sides (with letter "Д" in marking).

Stringers from the fiberglass plastic ensure insulating properties of the scaffolds.

Stringers of the scaffolds diverge downstairs and are equipped with rubber boots averting turning over and sliding.

The scaffolds PSK are designated for working in closed rooms.
